

## **Fibrox Technology LP Environmental, Health and Safety Statement**

At Fibrox Technology LP, we value human life, our environment and the safety of our employees and the communities in which we operate.

Fibrox Technology LP efforts go above and beyond standards set by OSHA and similar regulatory agencies in regards to workplace safety. We honor and value every employee, and take very seriously our responsibility to ensure that they have a safe and healthy environment in which to perform their duties. We expect our employees to take an active role in our safety program by learning all rules and regulations, following them every time they perform their work duties and bringing to our attention issues of concern. We believe that the strongest safety team is the one that is most active in the workplace.

By the very nature of what we do, our company is committed to safeguarding the environment. The raw product we use to create our mineral fiber is considered “by-product” of the ferroalloys industry. We convert that raw material into our products in a submerged arc electric furnace that operates using the most state-of-the-art energy efficiencies available to ensure we keep our power usage in check. That furnace is connected to multi-million dollar technologically advanced dust collection systems to protect the air from emissions. We are proud to boast a virtually 100% closed loop system in our manufacturing process that ensures there are no solid wastes sent to landfills. Fibrox Technology LP and its owners believe that a balance can exist between manufacturing and good environmental stewardship; we work to maintain that balance and strive to lessen our environmental footprint throughout our manufacturing, processing and shipping activities every day.

Our mineral fiber products were born out of a need for a material for thermal insulation, high temperature gaskets and seals, composite reinforcement, friction materials, refractory, coatings and horticulture that had no negative impact on the health of industrial workers or end users. We take that responsibility very seriously. Our researchers and quality control technicians continuously explore opportunities to meet and exceed health and safety compliance regulations worldwide and actively engage in discussions to improve products on an industry-wide basis.

At Fibrox Technology LP, we take great pride in the work that we do to safely manufacture environmentally sound, quality products for our customers. We believe that is our responsibility to our employees, our customers and the world in which we exist.
